

America's #1 Choice for Gutter Protection

Got Ice?

Get HELMET HEAT!

Icicles and Ice dams

- Stays Hidden - No Unsightly Wires
- Self Regulating & GFCI Protected
- No Roof Clips Required as with Regular Heat Wire

No icicles, no Ice dams with Helmet Heat

- Significantly Prevents formation of Ice & Icicles
- Helps Prevent Slippery Walkways
- Energy Efficient and Easy to Use
- Specially Designed for Use with Gutter Helmet
- Prevents wet ceilings caused by ice dams

WHAT IS HELMET HEAT?

Helmet Heat is a self-regulating heating cable that can help protect your home from ice damage. Ice or icicle formation along the eaves of your home may contribute to slippery steps and walkways. This potential safety hazard may be significantly reduced with the use of Helmet Heat.

Helmet Heat is self-regulating which means as the temperature drops around the cable, the cable responds by heating up. As the temperature rises, the cable cools down.
