

Micro-CS™

COMMERCIAL SERIES GUTTER PROTECTION

1

Industrial Kynar paint system to preserve the finish

2

Heavy Gauge .024 aluminum materials to maximize strength

3

Molded Screen Louver System aids in controlling water flow

4

Convex screen design readily sheds debris

5

Stainless Steel Micro Mesh screen keeps out even the smallest debris

Micro-CS™

COMMERCIAL SERIES GUTTER PROTECTION

Multiple Commercial Applications

Introducing Micro-CS™ – Commercial Series Gutter Protection, developed by Gutter Helmet®, the most trusted name in gutter protection. Micro-CS™ is engineered for commercial buildings and other applications where the use of “brackets” and “reverse curve” technology impedes installation.

Micro-CS™ is the only product with a Molded Screen Louver System – engineered to draw rain-water in, while preventing debris from entering. Even tiny particles, such as shingle grit and pollen are impermeable to the micro screen! Additionally, the Convex Screen Design readily sheds debris; this critical design feature sustains performance and keeps gutters free flowing.

Constructed from Heavy Gauge .024 aluminum materials to maximize strength and coated with an industrial Kynar paint system to preserve the finish, Micro-CS™ meets the demand of every contractor.

Proudly made in the USA, Micro-CS™ is tested to meet the highest quality of standards. When it comes to gutter protection; for your next job, look to Gutter Helmet® with over 25 years of ingenuity and dedication.

Works with any type roof application

Works with flat roofs and other commercial applications
